

Managing Projects in a Multi-cultural Environment

Overview

From managing a cross-boarder M&A project to coordinating a new system implementation involving a number of countries in a region, the life of a professional in an international organisation is a complex amalgamation of projects of all types and scales. Achieving the desired outcome in any such project situation requires not only determination of all parties involved, but systematic approach to planning and controlling all resources and activities that make up the comprehensive task, leading to a successful completion.

Available in both English and Japanese, this course enables participants to understand the principles of good project management, and helps them apply appropriate tools and techniques to achieve desired outcomes.

Objectives

Designed specifically to meet the needs of professionals working in an international context, this programme enables the participants to:-

- ✓ understand the key principles of project management
- ✓ recognise the value of adopting a structured methodology
